Role of Dealer/ Distributor

- These OEMs undertake several Air-conditioning projects for Malls, Theaters, Commercial & Residential buildings, Commercial complexes, Restaurants, Hotels, Hospitals etc. Once the local Air-conditioning dealer of any OEMs undertakes such orders, he is in requirements for Air-conditioning raw material such as Copper Pipes which has to be supplied at site by our distributor. So since this market is very fragmented, we appoint our local distributor who keeps the ready inventory of some fixed sizes of Copper tubes & have to supply just in time at the project site. Our distributor also has to keep overview of any project coming up in local area & must accordingly meet local AC dealers & Consultants locate geographically.
